

OWNER OPERATIONS GUIDE

Private Access & Key Management

How to issue, use, monitor and revoke access on the live Manoir Kits site.

LIVE SITE	https://manoir-kits-private.onrender.com/
VISITOR SIGN-IN	https://manoir-kits-private.onrender.com/access
ACCESS CONTROL	https://manoir-kits-private.onrender.com/admin/access

LIVE VERIFIED	Production test completed July 28, 2026: code creation, role permissions, deep-link return, session persistence, logout, limits and revocation passed.
---------------	--

Know which credential to use

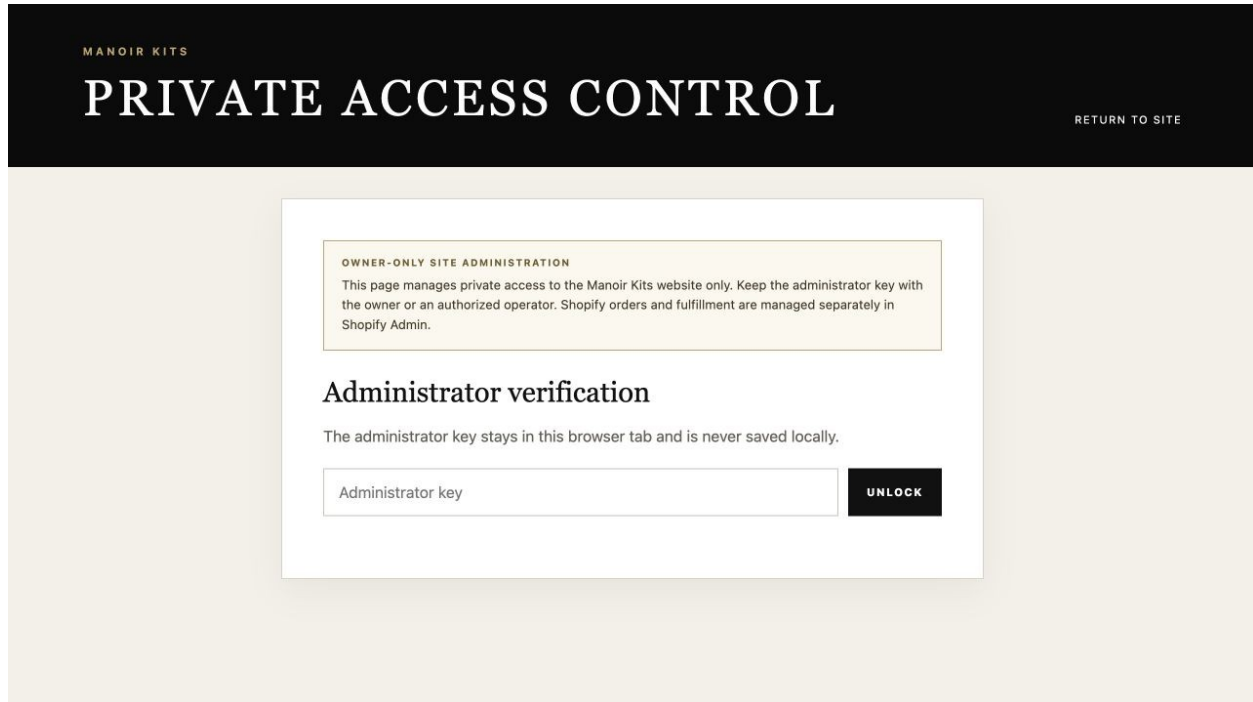

ADMINISTRATOR KEY Unlocks the owner-only website dashboard at /admin/access so an authorized operator can create, monitor and revoke personal codes. It controls site access only—not Shopify. Stored in Render as ACCESS_ADMIN_SECRET. Never send it to visitors.	PERSONAL ACCESS CODE The MK-... code assigned to one person. Controls site entry, role, expiration, sign-in count and network count. The complete code is shown only once.
---	---

Before you start

- Open the live site once first. Render's free service can take about a minute to wake after inactivity.
- Keep the administrator key in a password manager. Do not paste it into email, texts, decks or this guide.
- Give every person a separate personal code so access and activity remain attributable.

1. Unlock the owner-only dashboard

The private-access dashboard is part of the Manoir Kits website. It manages website entry only; orders, payments and fulfillment remain in Shopify Admin.

The access-control page now labels itself as owner-only and separates website access from Shopify operations.

1. Open <https://manoir-kits-private.onrender.com/admin/access>.
2. Confirm the OWNER-ONLY SITE ADMINISTRATION notice is visible.
3. Enter the administrator key and select Unlock.
4. Keep this key with the owner or an authorized operator; never send it as a visitor code.

WHERE THE KEY LIVES If the administrator key is unavailable, open Render > manoir-kits-private > Environment and reveal ACCESS_ADMIN_SECRET. Do not copy it into this guide or a message.

2. Create a personal code

The screenshot shows a web interface titled 'PRIVATE ACCESS CONTROL' with a 'RETURN TO SITE' link. Below the title is a section labeled 'ISSUE ACCESS' with the heading 'Create a personal code'. The form contains several fields: 'PERSON OR ORGANIZATION' (text input), 'EMAIL (OPTIONAL)' (text input), 'PREVIEW CODE TYPE' (dropdown menu showing 'Private visitor – site gate only'), 'EXPIRES' (date/time picker showing '08/11/2026, 09:19'), 'SIGN-IN LIMIT' (text input showing '25'), and 'UNIQUE NETWORK LIMIT' (text input showing '3'). There is also an 'INTERNAL NOTES (OPTIONAL)' text area. At the bottom left is a 'GENERATE PERSONAL CODE' button. A note at the bottom right states: 'The full code is shown once. Store it in your password manager before leaving this page.'

Create one personal code per recipient, with a specific role, expiry, sign-in limit and network limit.

1. Enter the person's or organization's name. Add an email only when it helps identify the recipient.
2. Choose the code type: private visitor, footballer or owner website access.
3. Set the expiry, sign-in limit and unique network limit.
4. Add an internal note when useful, then select Generate Personal Code.
5. Copy the complete MK-... code immediately and store it securely before leaving the page.

SHOWN ONCE The server stores a secure hash, not a recoverable copy of the complete personal code. If the code is lost, revoke it and generate a replacement.

3. Choose the right role and limits

Code types

CODE TYPE	USE	ACCESS
Visitor	Private preview, clients and reviewers	Site gate and standard jacket edition
Footballer	Approved players or special customers	Visitor access plus the full-leather Footballers edition
Owner	Site owner or trusted operator	All website roles and features; does not unlock the owner-only access dashboard

Suggested starting settings

RECIPIENT	EXPIRY	SIGN-INS	NETWORKS
Short review or client preview	7 days	10	2
Footballer or active collaborator	14 days	25	3
Owner device access	Up to 1 year	200	10

Share the code safely

- Send only the recipient's personal MK-... code—not the administrator key.
- Use a separate code for every person, agency or partner.
- Tell the recipient the expiry date and ask them not to forward the code.
- If access is no longer needed, revoke it instead of waiting for expiration.

ACCESS BOUNDARY An Owner personal code grants all website features to that recipient. It still does not open /admin/access and it does not grant access to Shopify Admin.

4. Sign in, use and exit

PRIVATE PREVIEW

MANOIR KITS

Enter the personal access code issued to you.

PERSONAL ACCESS CODE

MK-XXXXXXXX-XXXX-XXXX-XXXX

ENTER PRIVATE SITE

ACCESS SECURITY NOTICE

To protect this private preview, access attempts record the person assigned to the code, time, exact connection IP, approximate region or coordinates when supplied by our hosting provider, requested page, browser/OS, language, timezone, screen size, and a limited device-capability summary. We do not request precise device location or use

Recipients use their personal MK-... code at the private-preview gate; they never use the administrator key.

1. Open the visitor sign-in link, or any protected page. Deep links return to the requested page after approval.
2. Enter the assigned personal MK-... code and select Enter Private Site.
3. Confirm the expected role is active. Footballer codes unlock the full-leather edition; visitor codes keep it locked.
4. Use the site normally. The private watermark identifies the active recipient.
5. Select Exit in the watermark panel to clear the browser session.

SESSION BEHAVIOR A valid session can last up to seven days, but never beyond the code's expiration. Reloading a protected page confirms whether the session is still valid.

5. Revoke and monitor access

The screenshot displays two sections of the owner-only dashboard. The top section, titled 'ACTIVE INVITES' and 'Personal access codes', features a table with columns: PERSON, CODE TYPE, USES, LAST USED, EXPIRES, and STATUS. A 'REFRESH' button is in the top right. The table shows one entry for 'Guide example — Client preview' with a status of 'ACTIVE' and a 'REVOKE' button. The bottom section, titled 'SECURITY LOG' and 'Recent access activity', includes a note about data retention and a table with columns: TIME, PERSON, RESULT, IP, APPROX. LOCATION, BROWSER / DEVICE, and REQUESTED PAGE. A 'REFRESH' button is also present. The log shows a single entry for the same user with a result of 'ALLOWED'.

PERSON	CODE TYPE	USES	LAST USED	EXPIRES	STATUS
Guide example — Client preview preview@example.com	visitor	1/10 · 2 networks	7/28/2026, 9:18:58 AM	8/11/2026, 9:17:00 AM	ACTIVE

TIME	PERSON	RESULT	IP	APPROX. LOCATION	BROWSER / DEVICE	REQUESTED PAGE
7/28/2026, 9:18:58 AM	Guide example — Client preview	ALLOWED	::ffff:127.0.0.1	Not supplied by host	Mozilla/5.0 (Macintosh; Intel Mac OS X 10_15_7) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/150.0.0.0 Safari/537.36 en-US - America/Los_Angeles · 1470×956 @ 2x · macOS · 8 logical processors · 16 GB device memory · 0 touch points	/

The owner-only dashboard shows active personal codes, usage, expiration, revocation controls and recent sign-in activity.

Revoke access

1. Open the access-control dashboard and unlock it with the administrator key.
2. Find the recipient under Personal access codes.
3. Select Revoke and confirm. The code cannot be used again.
4. An existing session is rejected on its next protected request or page reload.

WHAT THE LOG SHOWS Recent access activity is retained for 30 days and records the assigned person, result, connection IP, approximate provider-supplied location when available, browser/device summary and requested page.

6. Troubleshoot and verify

Common sign-in messages

MESSAGE	WHAT IT MEANS	ACTION
Not valid	The text is malformed or incomplete.	Paste the complete MK-... code.
Invalid, expired, revoked or use limit	The code is no longer eligible.	Check its dashboard status or issue a replacement.
Network limit reached	The code was used from too many unique networks.	Verify the recipient, then issue a new code if appropriate.
Too many attempts	Ten recent failed attempts triggered a 15-minute lockout.	Wait 15 minutes; do not keep retrying.

Fast troubleshooting

- Site shows Render loading: wait up to one minute, then refresh once.
- Administrator key is rejected: confirm you are using the live ACCESS_ADMIN_SECRET from Render, not a local development key.
- Wrong jacket role appears: verify the code type in the dashboard, then reload the protected page.
- A saved code stopped working: check expiration, revocation, sign-in usage and network usage.
- The full code was lost: revoke the grant and generate a new one; complete codes cannot be recovered.

Live verification completed

CHECK	RESULT
Administrator dashboard unlock and production database load	PASS
Personal code creation and deep-link return	PASS
Visitor lock and Footballer full-leather permission	PASS
Session persistence and Exit logout	PASS
Single-use exhaustion on the second attempt	PASS
Revocation invalidated the active session and blocked reuse	PASS
Temporary live QA codes revoked after testing	PASS
