

MANOIR KITS
OWNER OPERATIONS GUIDE

SHOPIFY ORDER FLOW

How checkout, order transfer and fulfillment work

JULY 2026 | VERSION 1.0

The short answer

There is no manual order import. The Manoir Kits configurator creates a Shopify cart, Shopify completes the checkout, and the paid order appears directly in Shopify Admin.

WHO HANDLES WHAT

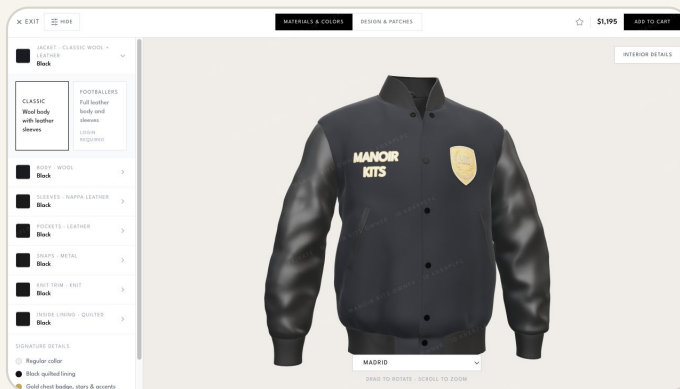

Manoir Kits website: jacket design, edition, size, colors, materials, personalization and the owner-only dashboard for private site access codes.

Shopify Admin: secure checkout, customer information, shipping, taxes, payment, order record, confirmation, fulfillment and tracking.

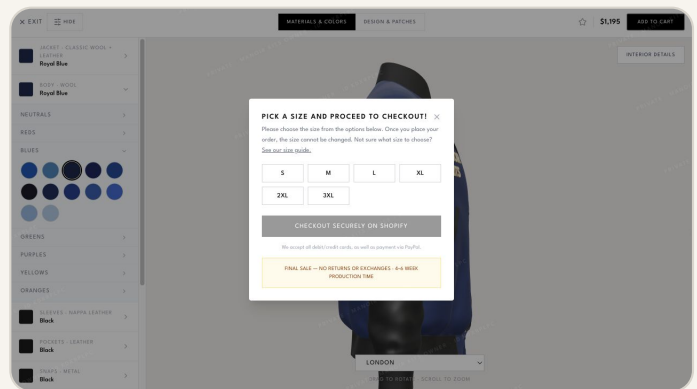

From jacket design to Shopify

The customer builds on the Manoir Kits site, but checkout and order creation happen inside Shopify.

1. Customer configures the jacket.

2. Customer selects a size and starts secure checkout.

- 1 The configurator captures the product choices**
Edition, size, materials, colors, city, numbers, stars, lining and other personalization are prepared as order attributes.
- 2 Edition and size select the exact Shopify variant**
Classic and Footballers editions each have a Shopify variant for S, M, L, XL, 2XL and 3XL. The selected pair determines the merchandise ID and price.
- 3 The site creates a Shopify cart**
The storefront sends one line item, quantity 1, with all customization fields attached. Shopify returns a secure checkout URL.
- 4 The browser moves the customer to Shopify**
The customer completes contact details, shipping and payment on Shopify. The Manoir Kits site does not collect card numbers.

Important: The site hands Shopify a cart, not a finished order. Shopify creates the order only after checkout completes successfully.

What Shopify receives

The selected product variant and the complete customization travel together into Shopify checkout.

The screenshot displays the Shopify checkout interface. On the left, the 'Payment' section is active, showing a 'Credit card' payment method. It includes a 'Testing instruction' box with values for simulation, followed by input fields for 'Card number', 'Expiration date (MM / YY)', 'Security code', and 'Name on card'. There are also checkboxes for 'Use shipping address as billing address' and 'PayPal'. A 'Pay now' button is at the bottom. On the right, the product 'Varsity Jackets' is listed with its price of \$1,195.00. Below the product details, a summary table shows 'Subtotal' as \$1,195.00, 'Shipping' as 'Enter shipping address', and 'Total' as 'USD \$1,195.00'. A 'Scroll for more items' button is visible over the product details.

Shopify checkout shows the selected variant, price and customization fields. This screenshot uses Shopify test mode.

PRODUCT

Variant: edition plus size

Quantity: 1

Price: controlled by the Shopify variant

MATERIALS AND COLORS

Body material/color, sleeve color, leather type, pockets, snaps, knit trim and inside lining.

PERSONALIZATION

Back city, back number, gold stars, back design color, left/right sleeve numbers and sleeve number color.

ORDER RULES AND SOURCE

Builder source, 4-6 week production time and final-sale status. Customer, shipping and payment are collected by Shopify.

Payment security: Card and wallet information is entered directly into Shopify checkout. It is not stored by the Manoir Kits configurator.

Complete delivery and payment

Shopify collects the customer's shipping details and payment before it creates the final order.

Shipping information is complete.

Payment is ready inside Shopify checkout.

A successful checkout produces the Shopify order-confirmation screen.

Order boundary: Until Shopify confirms checkout, the customer has not created a paid order. After confirmation, the order is already in Shopify Admin—there is no second transfer or manual import.

Where the order appears

Once payment succeeds, the order is immediately available under Shopify Admin > Orders.

Test orders shown. Live orders use the same list but contain the real customer and payment data.

Read the order list at a glance

PAID

Shopify recorded a successful payment. Production can begin after the details are reviewed.

UNFULFILLED

The order has not shipped yet. This is the normal status for a new made-to-order jacket.

FULFILLED

The order has shipped or has been marked complete, usually with tracking attached.

1 Open Shopify Admin

Select Orders from the left navigation.

2 Open the newest paid order

Confirm the customer, total, payment status and fulfillment status before production.

3 Open the line item details

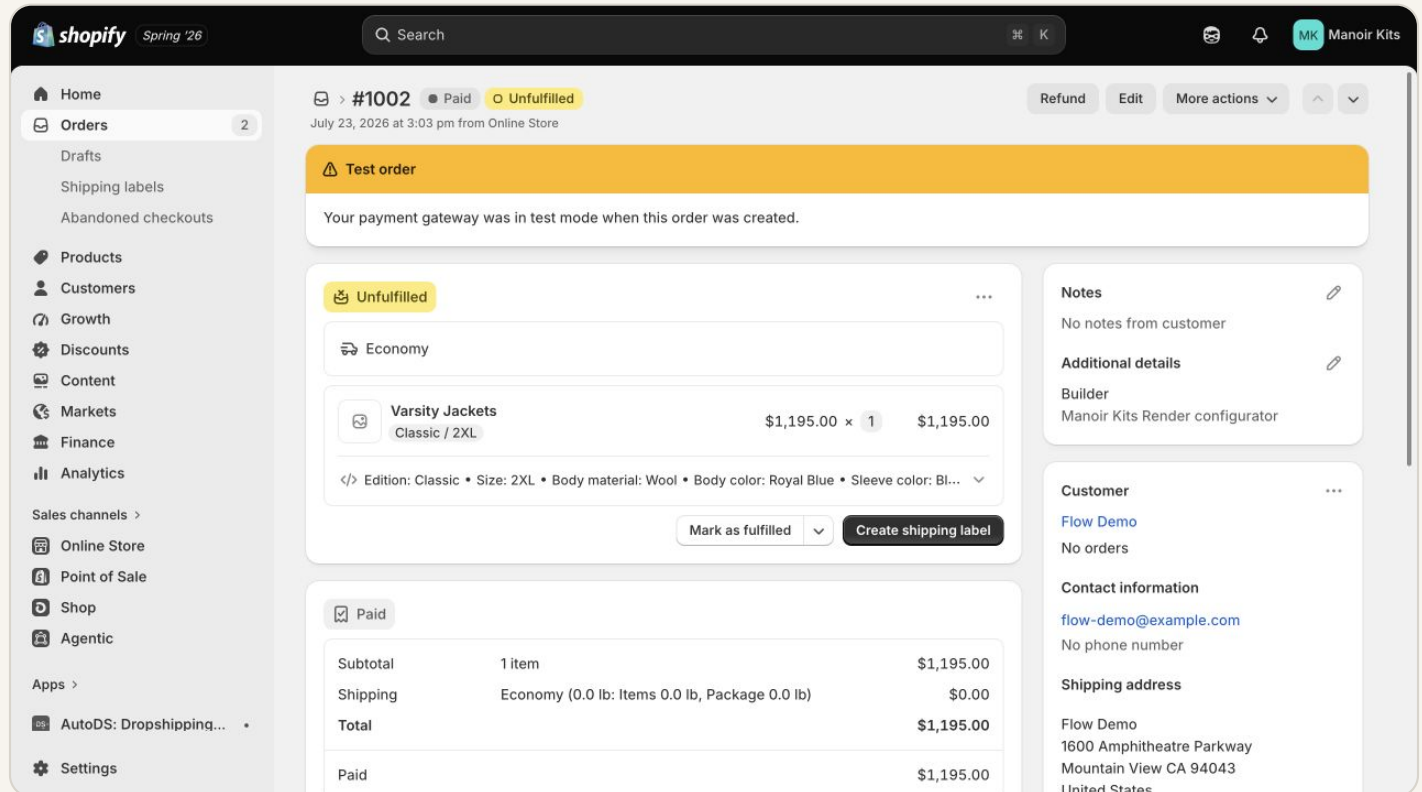

The jacket's edition, size and customization fields are stored with the product line.

Separate credentials: The Manoir Kits website administrator key controls private site access only. Use the store owner's Shopify account to open Shopify Admin and manage orders.

Review the build before production

The order page is the source of truth for what the customer purchased and how the jacket should be produced.

The test-mode banner appears only on test orders. Live orders show the same product, payment and fulfillment sections.

Fulfillment checklist

- 1 Confirm Paid**
Do not begin production while payment is pending or failed.
- 2 Confirm variant**
Check edition, size, quantity and price.
- 3 Read every field**
Expand the line item and verify all custom attributes.
- 4 Produce the jacket**
Use the Shopify order as the production specification.
- 5 Add shipping**
Create a label or mark fulfilled and enter tracking.
- 6 Notify customer**
Shopify sends the fulfillment and tracking update.

Stop and review before fulfillment: If any customization field is blank, contradictory or unexpected, do not guess. Contact the customer and document the confirmed change in the Shopify order notes.

Track the order after checkout

Shopify keeps a dated timeline of the checkout, payment, fulfillment and owner notes.

The screenshot displays the Shopify admin interface for an order. On the left is a sidebar with navigation links: Home, Orders (2), Drafts, Shipping labels, Abandoned checkouts, Products, Customers, Growth, Discounts, Content, Markets, Finance, Analytics, Sales channels (Online Store, Point of Sale, Shop, Agentic), Apps (AutoDS: Dropshipping...), and Settings. The main content area is divided into three sections. The top section shows order summary details: Subtotal (\$1,195.00 for 1 item), Shipping (\$0.00 for Economy), Total (\$1,195.00), and Paid (\$1,195.00). The middle section is the 'Timeline' with a comment box (HB, Leave a comment...) and a list of events: 'Order confirmation email was sent to Flow Demo (flow-demo@example.com).', '\$1,195.00 USD was captured using a Bogus ending in •• 1.', '\$1,195.00 USD was authorized using a Bogus ending in •• 1.', 'Confirmation #NQ0R2JY18 was generated for this order.', and 'Flow Demo placed this order on Online Store (checkout #48828885958965)'. The bottom section contains 'Shipping address' (Flow Demo, 1600 Amphitheatre Parkway, Mountain View CA 94043, United States), 'Billing address' (Same as shipping address), 'Conversion summary' (No conversion details available), 'Order risk' (Analysis not available), and 'Tags'.

The order timeline provides a permanent operational record for the owner and fulfillment team.

- 1 Confirm the creation and payment events**
Use the timestamps and payment status to verify that Shopify accepted the checkout.
- 2 Record approved changes in order notes**
If the customer changes a production detail, document the confirmed change in Shopify before work continues.
- 3 Add fulfillment and tracking**
When the jacket ships, enter the carrier and tracking number so the timeline and customer notification stay complete.

Use Shopify as the record: Keep production decisions, approved changes and shipping updates attached to the order instead of relying on separate texts or memory.

Daily order workflow

Use this page as the operating checklist for every new Manoir Kits order.

01	Open Orders	Shopify Admin > Orders
02	Select new paid order	Confirm Paid and Unfulfilled
03	Review product details	Edition, size, colors, materials and personalization
04	Send to production	Use the Shopify line item as the build specification
05	Fulfill when shipped	Add carrier and tracking, then mark fulfilled
06	Keep the record	Use order notes for any approved changes

Troubleshooting

- No order appears**
 - The customer may not have completed payment. Check Shopify's abandoned checkouts before creating anything manually.
- Checkout cannot start**
 - The selected Shopify variant or storefront configuration may be missing. Capture the error and contact the site administrator.
- Customization is missing**
 - Do not fulfill. Save the order number and contact the site administrator so the handoff can be checked.
- Customer requests a change**
 - Confirm the change in writing and record it in Shopify order notes before production continues.

THE KEY POINT

Orders do not transfer later. A successful Manoir Kits checkout is already a Shopify order. Shopify remains the source of truth for payment, customer details, fulfillment and tracking.

Questions about an order: include the Shopify order number.
